

## ***Mid Atlantic Micro-Nano Alliance Newsletter – June/July Edition***

In this Issue:

- I. **SAVE THE DATES**
  - II. **OPPORTUNITIES FOR RESEARCH FUNDING**
  - III. **UPCOMING EVENTS (detail)**
  - IV. **JOB ANNOUNCEMENTS**
  - V. **NEWS HIGHLIGHTS**
- I. SAVE THE DATES (more detail in section III)***

August 8-10 Micro/Nano Manufacturing Workshop Napa, CA+

October 19<sup>th</sup> ½ day Tutorial Workshops K Center Laurel MD sponsored by the Mid Atlantic Micro Nano Alliance

October 28-31 IEEE Sensors Limerick Ireland

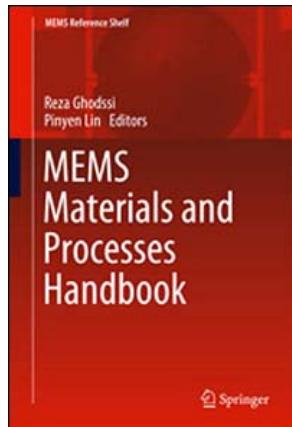

January 21-26 MicroTAS (abstract submission July 11<sup>th</sup>) San Francisco CA

***II. Opportunities***

***III. Upcoming Events***

***IV. Job Openings***

***V. NEWS***

Mid Atlantic Micro Nano Alliance members edit major work in the MEMS Reference Shelf for Springer Link- Kudos to Reza Ghodssi and Pinyen Lin.

#### Product Description

"MEMS Materials and Processes Handbook" is a comprehensive reference for researchers searching for new materials, properties of known materials, or specific processes available for MEMS fabrication. The content is separated into distinct sections on "Materials" and "Processes". The extensive Material Selection Guide" and a "Material Database" guides the reader through the selection of appropriate materials for the required task at hand. The "Processes" section of the book is organized as a catalog of various microfabrication processes, each with a brief introduction to the technology, as well as examples of common uses in MEMS.

#### From the Back Cover

MEMS Materials and Processes Handbook is a comprehensive reference for researchers searching for new materials, properties of known materials, or specific processes available for MEMS fabrication. The content is separated into distinct sections on 'Materials' and 'Processes'. The extensive 'Material Selection Guide' and a 'Material Database' guides the reader through the selection of appropriate materials for the required task at hand. The 'Processes' section of the book is organized as a catalog of various microfabrication processes, each with a brief introduction to the technology, as well as examples of common uses in MEMS. The book also: Provides a comprehensive catalog of various microfabrication processes, each with a brief introduction to the technology, as well as examples of common uses in MEMS Discusses specific MEMS fabrication techniques such as additive, subtractive, and lithography/patterning, as well as wafer bonding, doping, surface treatment/preparation, and characterization techniques Provides the reader with a quick check list of the advantage/disadvantage of fabrication MEMS Material and Processes Handbook will be a valuable book for researchers, engineers and students working in MEMS and materials processing.
